/// Centers of Excellence 360

Cancer Program™

ACCESS TO CANCER EXPERT OPINIONS AND CARE THAT PUT HEALTH PLAN MEMBERS IN CONTROL.

/// A people-oriented cancer program.

Those living with a cancer diagnosis now have a powerful advocate in their corner. At Contigo Health, LLC, we help people navigate the complexities of cancer care and make informed decisions throughout their journey—all in a bundled care package that helps you mitigate financial risk.

With nearly 2 million new cancer cases projected last year, you, like many employers, are likely facing a mounting need for increased cancer care support to protect the lives of your health plan members while also limiting your organization's financial exposure.

Getting access to effective treatment early on can make all the difference in the world. Unfortunately, it's often hard to know where to turn or who to trust. Knowing the options can put health plan members back in control—and help you manage costs.

Working in collaboration with a health plan member's primary cancer care provider, the **Contigo Health Centers of Excellence 360 Cancer Program™** offers expert medical opinions to help optimize cancer diagnosis, treatment, and outcomes.

More than access to care, it's access to caring.

When a person is facing a cancer diagnosis, they're going to have to make some of the most important decisions of their life. Our cancer program gives them a powerful advocate in their corner, addressing both the medical and psychosocial impacts of cancer.

/// Charting a better path to cancer care.

As part of our Centers of Excellence 360 program, we bring you a cancer solution designed around the holistic needs of your health plan members.

Our cancer program is designed to:

- // Provide health plan members and their care teams access to expert opinions from leading U.S. cancer specialists—at no cost
- // Facilitate collaboration with plan members' existing providers
- // Help members obtain the right diagnosis and the right treatment plan
- // Broaden plan member access to a full range of quality care options
- // Simplify the complexities of cancer care navigation
- // Empower plan members to make informed decisions throughout their journey
- // Contain the cost of care
- // Help improve plan members' opportunities to get back to living their best life possible

We do this through:

An approach tailored to each individual

Employees and their families have access to the most appropriate cancer specialists. They'll get a virtual expert medical opinion or an in-person evaluation by a multidisciplinary clinical team led by an oncologist specializing in the individual's form of cancer.

A care plan developed by an elite cancer care team

Providers have peer-to-peer collaboration, 1:1 communication, and a clinical support team to ensure everyone—including the health plan member and their treating oncologist—understands the plan.

The Contigo Health® nurse care navigators

Health plan members are given valuable navigation and advocacy support through every step of the journey—including psychological and social-emotional support and resources.

Flexible support options

Support is delivered in the right setting for the member's needs and preferences, including virtual care as a convenient option that can minimize disruption and time away from home and work—with no out-of-pocket cost to members.

Advanced medicine

Genetic testing is included when clinicians need additional insight to make the proper diagnosis. Access to clinical trials may be available when suitable for specific conditions.

Twelve months of support

Members get continued access to specialized clinical resources that can deliver the ongoing care they need, plus reassurance they are never alone in their journey.

Distinct cost savings for all

Thanks to bundled care pricing and zero member out-of-pocket costs for virtual care, you get the health plan benefits and financial risk mitigation you need to enable healthier plan members and a healthier bottom line.

It's time to have more control.

We can help you establish a cancer program designed to give access to the precise expertise and cancer care your plan members need—and the cost savings you want.
